

NICO

15SXXXXX

UV photometer

for continuous online measurement of nitrate in water

The measuring principle of **NICO** is based on the principle of photometry. By analyzing the absorption of light at three specific wavelengths, NICO enables precise determination of the nitrate content - taking turbidity and organic matter into account. Integrated temperature compensation also ensures stable and reliable measurement results.

Thanks to the TriOS G2 interface, the sensor can be conveniently configured via a web browser. Integration into existing process control systems or external data loggers is straightforward. NICO can be conveniently controlled via WLAN using a laptop, tablet or smartphone - without any additional software or app installation.

Thanks to the uniform device platform, all TriOS photometers offer a high level of compatibility for spare parts and accessories as well as efficient integration into existing systems.
